

Solution brief

What's New in Projectplace August 2017

With the August Release of Projectplace, we are excited to introduce new capabilities that will improve your experiences in both the creation and completion of workspaces. You can now enhance the team's efficiency in getting projects off the ground quickly with Projectplace's new Templates Library. It includes pre-populated workspaces for use across different departments in your organization. We are also making it possible to automate your workspace closing and archiving processes.

Template Library

Planning projects is far from simple, especially if you don't know where to begin. Projectplace's brand new Templates Library was built for just this purpose. It lets you accelerate your planning process so that your teams can focus on the important stuff, executing on the project's goals. Enjoy pre-populated templates for Marketing, IT, HR, and Services, complete with Gantt charts, Kanban boards, and document repositories. This will help to ensure that your resources always have a place to start with a clear path to the finish.

We will continue to build out the Template Library and would love to get your feedback on what kind of templates that would benefit your team the most.

The new templates will be available in our trials and for all our Enterprise customers.

Archiving automation

Do you find your list of workspaces only getting longer? Your team may be letting completed projects fall through the cracks, without bringing them to a proper close. With Projectplace's new workspace archiving automation, account administrators can facilitate if and when a workspace gets archived.

As a workspace head administrator/owner you can now receive a notification whenever a plan end date has been reached, helping you stay on top of all your active work. It's even possible to customize how long a workspace should live on once its plan end date has been reached. Ultimately, we are now giving administrators the necessary governance capabilities to keep their teams focused on workspaces in-flight rather than those lying dormant.

Other enhancements

We have continued to work on custom fields on cards and are now introducing two new field types; drop-down and time.

Lastly, we are proud to introduce several performance related enhancements and bug fixes. Our main goal is to provide an efficient, effective, performant space to collaborate and execute on work.
