Solution brief

What's New in Planview Projectplace
Q2 – 2018

2018 is flying by and Planview Projectplace® is continuing to deliver new and valuable functionality to features you know and love. Throughout this release cycle, we will be focusing on improving through customer driven enhancements and strategically designed innovations to help make our user's jobs more efficient and seamless than ever.

Undo in Plan

We are excited to include this long-awaited feature in our April release of Projectplace. With the new undo capability in the plan, a slip of the mouse will not result in a disaster. As the quarter goes on, this feature will be improved upon and enhanced to allow our users to undo any mistakes in their plan – making editing and updating a breeze.
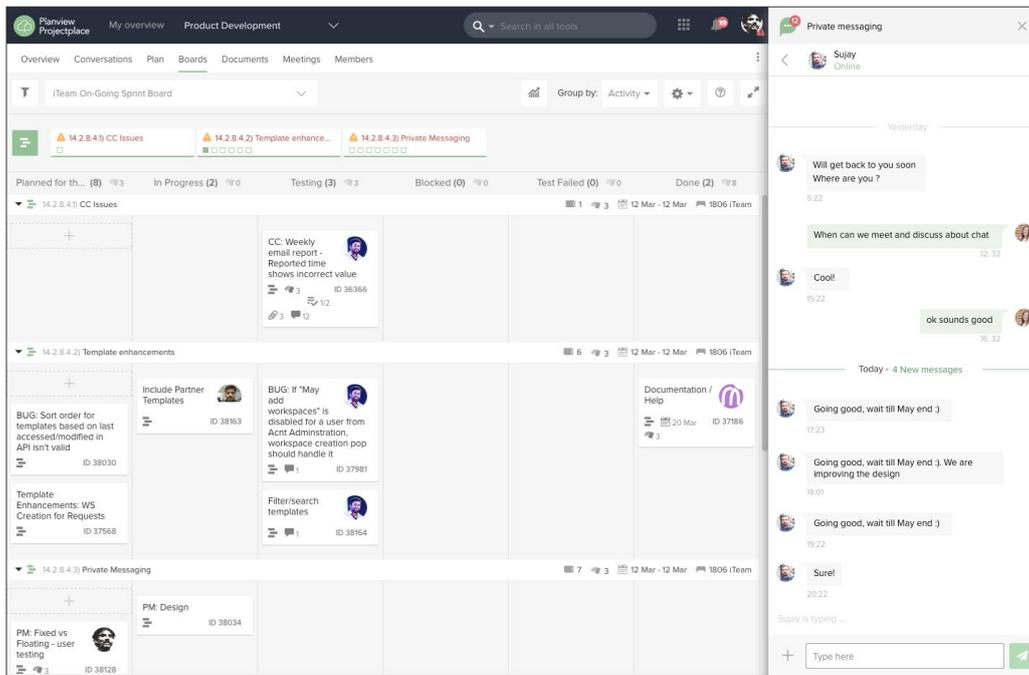

Projectplace Assistant

Everyone needs a personal assistant, one that keeps track of your time and organizes your work life. We wanted to bake that luxury into your Projectplace experience. With the new assistant feature, you will be able to quickly and easily report time based on your most recent actions in the tool, saving loads of time when filling out your dreaded timesheet. The assistant will also offer the ability to navigate to your most frequented parts of the tool with a single click, no matter where you are. Life is easier with some help, let Projectplace help organize your life. Check out this feature when it is delivered in June.

Team Assignment Requests

Ever need some help on a task but don't know who can help or even has the capacity? In our Q2 release, team assignment requests allow users to request cards to be completed by an entire team. Once the request has been made, the team can work together and delegate the work out or reject the request all together. This feature will allow organizations to run more efficiently with projects that include multiple teams or departments. With the increased complexity of large projects, crossfunctional product teams become a necessity. Make sure the right work is in the right hands with this new feature. Scheduled for release this May.

Direct Messaging

Need to have a live conversation in the context of your work? Instant messaging apps just adding one more thing to your team's plate? We are excited to introduce the ability for individual and group messaging within Projectplace. Projectplace messenger gives users the power to have live conversations, create cards and other work items with single coworkers or their team. Be up to date and on the same page with your team at any moment. Be on the lookout for this in June.

Workspace Connection to Roadmaps

When creating your long-term roadmap, planning initiatives for the long term can be tricky, especially when you start executing against those projects. With the ability to connect roadmap phases to project workspaces, we've enabled users to keep track of projects at a high level while they are being executed on in a purpose-built workspace. No more searching for projects and data, all relevant information will bubble up to your roadmap for a clear and concise view of progress. Be on the lookout for this game changing feature at the beginning of May.

Mobile Apps

We have an exciting release for our mobile applications coming throughout the second quarter. We are happy to bring the ability to attach documents from your Projectplace repository to cards and conversation posts from your iOS and Android apps. Security is also key. With our mobile apps you can add an extra layer of privacy with our pin-code safe guard at login. Stay connected and mobile with these new features being released throughout the quarter.

Other enhancements

Throughout the quarter, we will also be releasing several minor enhancements and bug fixes. We will be enhancing popular features like 'follow' and adding new ones like moving cards from one workspace to another. Be sure to keep up with our monthly release notes for updates on these features and many more. As always, our main goal is to provide an efficient, effective, performant space to collaborate and execute on work.
